**Magocard: print settings for MS Word when  
printing to Magocard Xtended/PCP Flex printer**

**Reward-It Ltd**

There are some anomalies when printing to an extended printer from Microsoft Word in Windows and only ½ a ticket will print onto a 140mm card. There will also be no 140mm option in PAGE SETUP.

There is no permanent fix, however there is a workaround to get the correct page options back;

Design the ticket within Word as normal. Make sure the page size is set to 140mm x 54mm with no margins (or very slight margins of 1 or 2mm).

To print, click PRINT > PRINTER PROPERTIES

Choose a different size (109mm x 54mm) from the drop-down menu.

Apply

Choose the correct size (140mm x 54mm) from the drop-down menu.

Apply.

The correct size should now show in the list within PAGE SETUP - Choose this correct size and save

Click PRINT (Make sure the correct size is showing)
